

OUMNH Museum Memory!!!

Test your memory and find the specimens on display in our museum - there are lots of different mammals, birds, minerals, insects and other animals all waiting to be discovered.

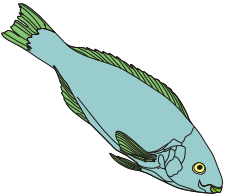

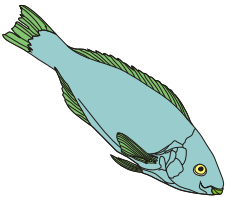

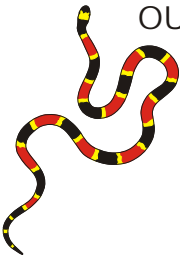

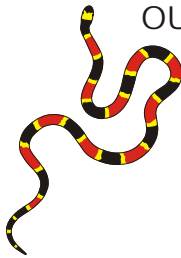

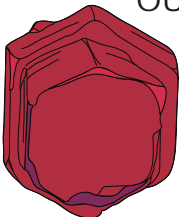

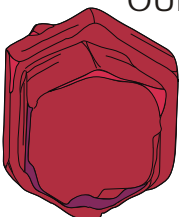

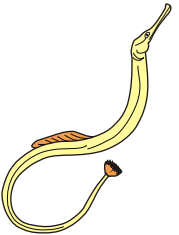

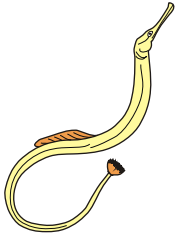

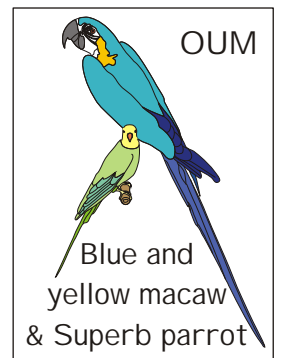

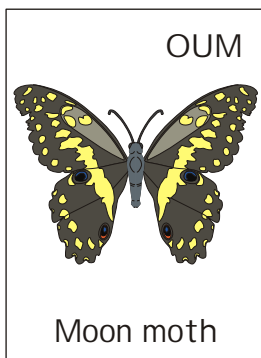

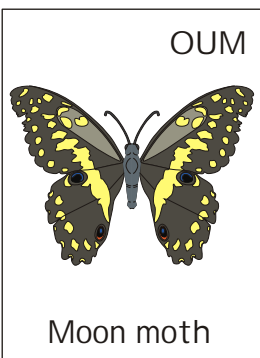

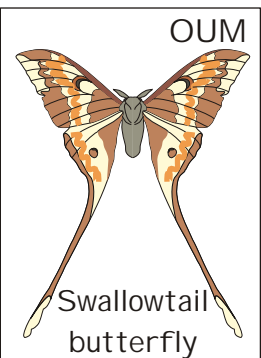

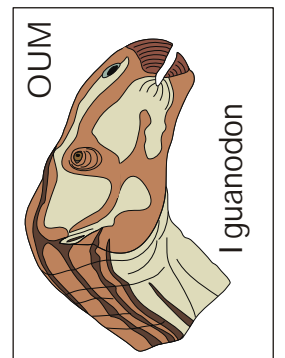

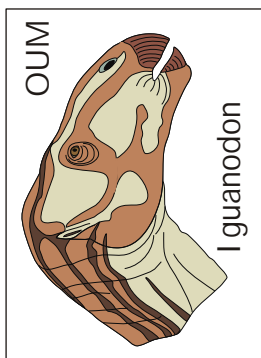

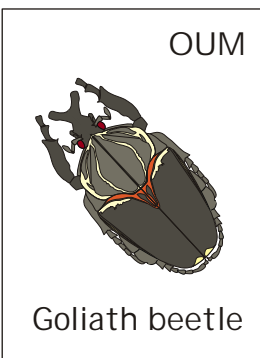

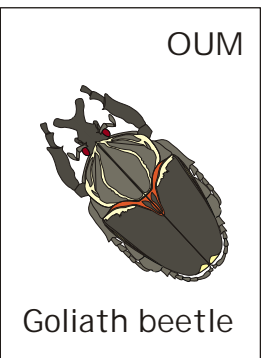

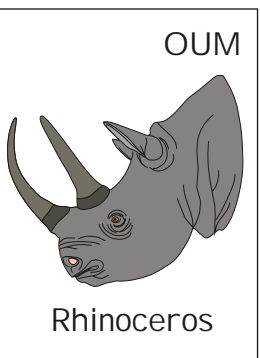

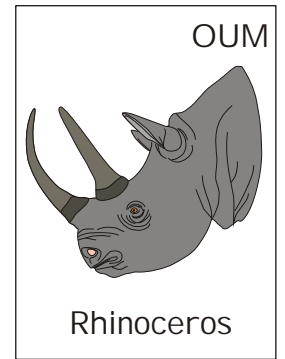

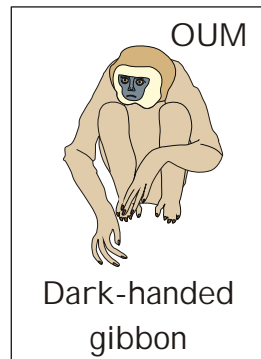

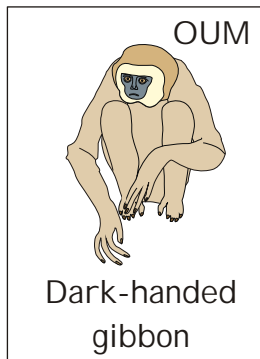

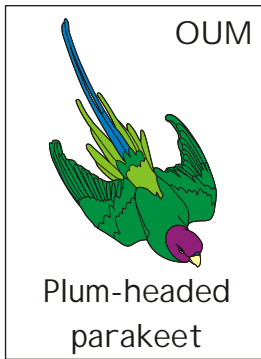

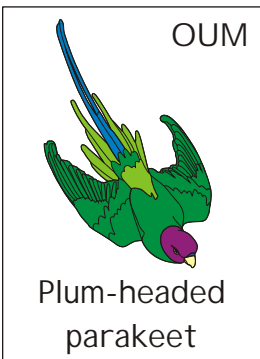

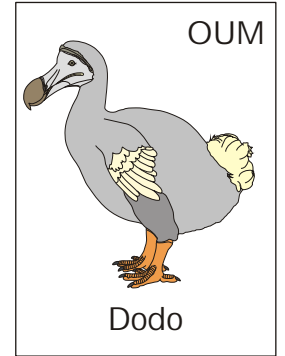

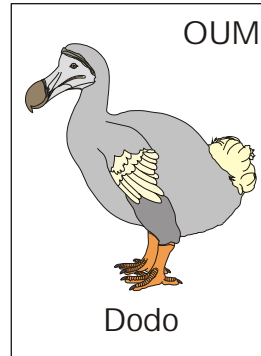

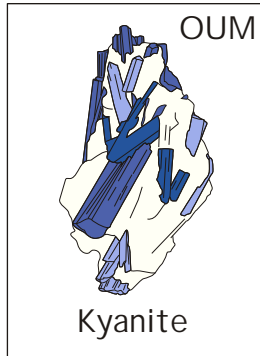

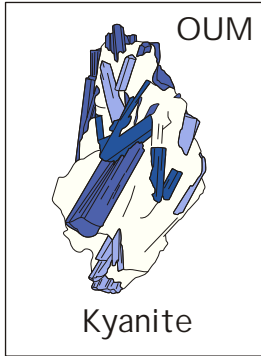

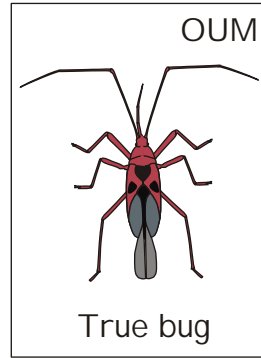

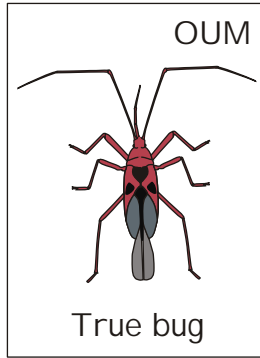

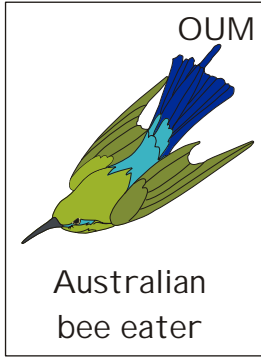

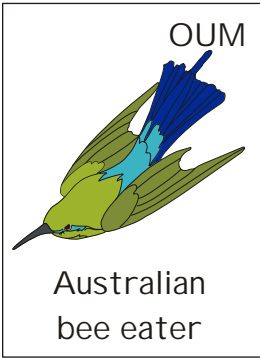

To Play:

1. Print out these pages and stick them to cardboard.
2. Carefully cut around each specimen card (you can cover them in clear sticky-back plastic to make them stronger).
3. Shuffle the specimen cards and lay them face down on a flat surface in five rows of ten.
4. Take turns to pick up two cards at random.

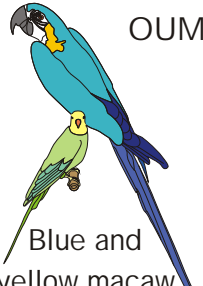

If the picture on the two cards is the same, the player picks up these two cards and turns over two more. If the two cards are not the same, the cards are turned back face down in the same place they were and it is the next player's turn. You must try and remember where similar cards are located and pick up as many pairs as possible. The winner of the game is the one who has the most pairs at the end of the game.

If you want to learn more about the specimens on the cards - why not visit the museum, or check out more of the children's pages on our website.
